

AXON INVESTIGATE

UNCOVER TRUTH FROM VIDEO EVIDENCE

Video is the most prolific source of evidence available to investigators today, but thousands of proprietary video file types create challenges and delay investigations when played incorrectly. Axon Investigate protects truth by providing an intuitive interface that unlocks the power of video evidence in an efficient, forensically-sound manner. Axon Investigate Pro provides additional tools for video-centric investigations, including multi-clip time syncing, file stitching, video enhancement, narrative report creation, court demonstratives creation and more.

HOW AXON INVESTIGATE CAN HELP YOUR AGENCY

- Protect Truth** – Improper playback software can alter video evidence and impede investigations. Axon Investigate allows you to review footage from more third-party proprietary video formats than any other solution on the market and provides immediate access to original metadata including date, time, image numbers, etc.
- 40% More Productivity** – More than 80% of investigations involve video evidence. Axon Investigate dramatically improves the video investigation process, saving officers up to 10 hours per week by providing simple, fast and repeatable workflows.
- Don't Miss a Thing** – Manage and organize hundreds of video sources into one project, track activity, tag relevant events, extract available video and create court-ready deliverables in standard, lossless formats.
- Testify with Confidence** – Axon Investigate is built by a team of certified, forensic video analysts and ensures that investigators view original video evidence and share accurate copies ready for court. Users can bring Axon Investigate into the courtroom and play full screen, zoomed or looped video evidence for the trier of fact while on the stand.

FEATURES

1. Drag, Drop and Accurately Play

Thousands of Video Formats

Investigators frequently encounter proprietary video formats like .DAV, .IRF, .EXE, .SSF and others. These files are notoriously difficult to play, but with Axon Investigate simply drag and drop thousands of different video formats into an intuitive interface and accurately play important video evidence.

2. Batch Convert Proprietary Video to Standard Formats

Convert proprietary video files to standard output formats like AVI or MP4, all without changing a single pixel within the images to maintain the forensic integrity of evidence. This feature is repeatable and can be batch processed on a large number of files.

3. Organize Video Investigations

Bring together video from multiple sources to tag relevant images, organize clips into groups, categorize metadata and uncover the full story by leveraging easy filter, sort and search functions.

4. Automatically Identify Date/Time info and Sync Multiple Clips

Video evidence often displays incorrect timing information, but Axon Investigate makes it easy to identify the timing differences between clips and correct them. Sync the evidence to real-time, create an accurate timeline, search the metadata, track suspects across multiple cameras and more.

5. Produce Demonstrative Exhibits (Pro)

Highlight regions of interest, create side-by-side demonstrations, add automated on-screen text to show timecodes or other relevant information and more. Create pdf narrative reports with embedded video for quick BOLO reports or shareable external reports.

6. Play Video Side-by-Side (Pro)

Multiple camera angles are frequently available of the same incident. Automatically tile these pieces of evidence into a canvas and allow viewers to watch multiple camera angles at the same time.

7. Enhance (Pro)

Enhance images and video with the push of a button to provide additional clarity to important evidence. Uncover hidden information in video images with powerful and easy-to-use clarification tools.

8. Camera Match Overlay (Pro)

Accurately calibrate and overlay video and imagery onto 3D point cloud data. The Camera Match Overlay Tool enables calculations that determine positions, distances, heights and other key measurements with your native 3D scanning software.

9. Training and certification

Axon Investigate is supported by innovative, live, online training courses that take a hands-on approach to teaching best practices for handling video evidence. Participants receive virtual access to case files, an Axon Investigate instance and instruction from a live trainer.
